# Student Mental Health Application

## Question 1 - Low-Fidelity Prototype

For students:

Screen 1 - Home Screen

Purpose: The main entry point of the student's application.

User Interaction:

The student opens the app.

They can choose from four main options:

Session History, My Condition, Motivation, or Daily Check-in.

Screen 2 - Daily Check-in Screen

Purpose: A daily questionnaire screen to track the student's mood and symptoms for the doctor.

User Interaction:

- \* The student selects how their day went and notes any symptoms.

- \* They tap the "Submit to Doctor" button to send the results.

Screen 3 - Condition Info Screen

Purpose: To educate the student about their mental health condition, its causes, and treatments.

User Interaction:

- \* The student reads information about their specific condition.

- \* They can scroll down to read about symptoms and recommended treatments.

Screen 4 - Motivation Screen

Purpose: To provide motivational messages and mental wellness tips for the student.

User Interaction:

- \* The student opens the Motivation section from the home screen.

- \* They read a motivational quote or message.

- \* The student can scroll to see tips.

## Screen 5 - Session History Screen

Purpose: To allow the student to view previous therapy sessions and doctor feedback.

User Interaction:

- The student opens Session History from the home screen.
- They see a list of previous sessions with dates.
- The student selects a session.
- They read doctor recommendations, progress updates and prescribed medications.

## Question 2 - Storyboard Prototype

Scenario: A student wants to enter their mood for the day using the Mental Health Application so the doctor can track their progress and plan future sessions.

Storyboard Steps:

1. Student opens the app on their phone.
2. Student clicks the Daily Check-in button.
3. Student answers questions about their mood and what happened today.
4. Student submits the form and gets a motivational message.
5. The doctor reviews the student's results to plan the next session or prescribe medication.

## Question 3 - Card-Based

### Prototype

#### Card 1 - Home page

- Session History
- My Condition
- Motivation
- Daily Check-in

Description: The main page where the student can access all features.

### Card 2 - Daily Check-in Page

- Mood selection
- Notes section
- Submit to Doctor button

Description: A page where the student records their daily mood, and notes, then submits the information to the doctor.

### Card 3 - Condition Info Page

- Condition description
- Causes
- Treatment information

Description: A page that provides information about the student's mental health condition, including causes, and treatments.

### Card 4 - Motivation Page

- Motivational message
- Tips

Description: A page that displays motivational messages and helpful tips to improve the student's mental well being.

User Flow:

Home Page → Daily Check-in → Submit → Motivation

OR

Home Page → My Condition → Read Information

## Interaction

| Student Name          | ID Number | Group Number | The task          |
|-----------------------|-----------|--------------|-------------------|
| Amjad Ahmed Zakaria   | 444006813 | 2            | System Response   |
| Retaj Hussain Alhazmi | 445006594 | 4            | User Interactions |
| Manar Turki Ahmed     | 445006780 | 3            | User Interactions |
| Ghala Shaher Albshri  | 445006326 | 3            | Interaction Types |
| Ghadeer Sami Nafadi   | 44511798  | 1            | Interaction Types |

## Application: Student Mental Health

### User Interactions→ Interfaces

The main actions performed by the user:

- Opening the application → App interface (GUI)
- Navigating between main sections (Home, Daily Check-in, My Condition, Motivation, Session History) → Touch interface (Navigation Menu)

- 
- Selecting Daily Check-in button → Touch interface (Button)
  - Filling the information about the day → Touch interface (Form Fields)
  - Submitting data to the doctor → Touch interface (Submit Button)
  - Read motivational message → Visual interface (Text Display)

- 
- Selecting My Condition button → Touch interface (Button)
  - Reading the condition information → Visual interface (Scrollable Text)

- 
- Selecting Motivation button → Touch interface (Button)
  - Read the tips → Visual interface (Cards / Text Display)

- 
- Selecting Session History → Touch interface (Button)
  - Read details about previous sessions → Visual interface (List View)

### Interaction Types

- **Instructing:** Occurs when the user issues direct commands to the system, such as tapping the "Daily Check-in," "Submit to Doctor," or "Motivation" buttons.
- **Exploring:** Involves navigating through the application's environment, such as browsing the "Session History" or reading educational materials in the "My Condition" section.
- **Manipulating:** Can be seen when the user directly interacts with interface elements, such as scrolling through condition details and wellness tips, or selecting mood indicators.
- **Responding:** Takes place when the system provides immediate feedback, such as displaying a confirmation or a motivational message after the user submits their daily check-in.
- **Conversing:** Present in a structured, question-and-answer format during the "Daily Check-in." The system prompts the user about their mood and symptoms, and the user provides their input, creating a dialogue-like flow without relying on complex conversational agents.

## System Response

**When the user performs actions, the system responds as follows:**

- **When the user opens the application:**
  - The system displays the home screen with all main options (Session History, My Condition, Motivation, Daily Check-in).
- **When the user selects “Daily Check-in”:**
  - The system opens a form where the user can select their mood and enter notes.
- **After the user submits their daily check-in:**
  - The system sends the data to the doctor.
  - A confirmation message is displayed.
  - A motivational message is shown to the user.
- **When the user selects “My Condition”:**
  - The system displays information about the student’s mental health condition, including causes and treatments.
  - The user can scroll to read more details.
- **When the user opens the “Motivation” section:**
  - The system shows motivational quotes and wellness tips.
  - The content updates as the user scrolls.

## User Research

| Student Name          | ID Number | Group Number | The task                               |
|-----------------------|-----------|--------------|----------------------------------------|
| Amjad Ahmed Zakaria   | 444006813 | 2            | Findings & Conclusion & Recommendation |
| Retaj Hussain Alhazmi | 445006594 | 4            | Project Context & Research Design      |
| Manar Turki Ahmed     | 445006780 | 3            | Data Collection & Data Analysis        |
| Ghala Shaher Albshri  | 445006326 | 3            | Data Collection & Data Analysis        |
| Ghadeer Sami Nafadi   | 44511798  | 1            | Findings & Conclusion & Recommendation |

## 1. Project Context

This project focuses on supporting students' mental health during busy academic semesters by helping them track their mood, record daily experiences, access helpful information about their condition, and communicate updates with their doctor.

## 2. Research Design

- Interviews (5–7 Questions)

|                                                                                                                                                                          |                                                                                                                          |                                                                                                                                                   |                                                                                                                                                                |                                                                                                                                                                 |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. How do you currently track your mood or mental well-being during a busy academic semester? (Open)                                                                     |                                                                                                                          |                                                                                                                                                   |                                                                                                                                                                |                                                                                                                                                                 |
| I usually do not track my mood in a structured way. I just notice when I feel stressed or tired during exams.                                                            | I track my mood by writing short notes in my phone when I feel anxious or exhausted.                                     | I usually do not track it formally, but I know my mood gets worse when I have many deadlines.                                                     | I sometimes rate my day mentally from good to bad, but I do not use a special system.                                                                          | I track my mental well-being by noticing changes in my sleep, energy, and motivation.                                                                           |
| 2. Can you describe a recent situation where you felt overwhelmed, and how you handled it? (Open)                                                                        |                                                                                                                          |                                                                                                                                                   |                                                                                                                                                                |                                                                                                                                                                 |
| Last week I had many assignments due at the same time, so I felt overwhelmed. I took a short break, made a to-do list, and finished the most urgent tasks first.         | I recently felt overwhelmed before a presentation. I talked to my friend, practiced my slides, and tried to sleep early. | A few days ago I had quizzes and project work together, so I felt stressed. I handled it by studying in small sessions and avoiding distractions. | I felt overwhelmed during midterms because I was not sleeping enough. I handled it by asking my teacher for clarification and organizing my study time better. | I recently felt overwhelmed when I had family responsibilities and university work at the same time. I tried to calm down, rest, and finish one task at a time. |
| 3. Have you ever used a digital tool or mobile app to communicate with a healthcare provider? (Closed: Yes/No)                                                           |                                                                                                                          |                                                                                                                                                   |                                                                                                                                                                |                                                                                                                                                                 |
| No                                                                                                                                                                       | Yes                                                                                                                      | No                                                                                                                                                | Yes                                                                                                                                                            | No                                                                                                                                                              |
| 4. The app requires you to describe "what happened today" before submitting it to a doctor. What would make you feel secure in sharing this personal information? (Open) |                                                                                                                          |                                                                                                                                                   |                                                                                                                                                                |                                                                                                                                                                 |
| I would feel secure if the app clearly explained that my data is private and only my doctor can read it.                                                                 | I would want strong privacy protection and reassurance that my information will not be shared with anyone else.          | I would feel better sharing personal information if the app let me control what is sent to the doctor.                                            | I would feel secure if the app used a password, showed privacy settings, and explained why the doctor needs the information.                                   | I would share personal information more comfortably if the app looked trustworthy and gave me the option to edit my response before                             |

|                                                                                                                                                       |                                                            |                                                                            |                                                     |                                                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|----------------------------------------------------------------------------|-----------------------------------------------------|------------------------------------------------------------------------|
|                                                                                                                                                       |                                                            |                                                                            |                                                     | sending it.                                                            |
| 5. Do you prefer reading detailed articles about your condition, or receiving short daily motivational tips? (Closed: Detailed Articles / Short Tips) |                                                            |                                                                            |                                                     |                                                                        |
| Short Tips                                                                                                                                            | Detailed Articles                                          | Short Tips                                                                 | Detailed Articles                                   | Short Tips                                                             |
| 6. What is the biggest barrier that might stop you from using a mental health app daily? (Open)                                                       |                                                            |                                                                            |                                                     |                                                                        |
| The biggest barrier is forgetting to use it every day.                                                                                                | I might stop using it if it takes too much time every day. | The biggest barrier is feeling emotionally tired and not wanting to write. | My biggest barrier would be worrying about privacy. | The main barrier is losing motivation to keep using the app regularly. |

### • Questionnaires (5–10 Questions)

- On a scale of 1 to 5, how would you rate your average stress level during the university semester?
  - ☐ (Very Low)
  - ☐ (Low)
  - ☐ (Moderate)
  - ☐ (High)
  - ☐ (Very High)
- How often would you realistically use the "Daily Check-in" feature to log your mood?
  - ☐ Daily
  - ☐ 2-3 times a week
  - ☐ Once a week
  - ☐ Rarely
- Which application feature do you think would be the most beneficial to you?
  - ☐ Session History
  - ☐ My Condition (Information & Articles)
  - ☐ Motivation (Tips & Quotes)
  - ☐ Daily Check-in
- Would receiving a motivational message after submitting your daily check-in encourage you to use the app more?
  - ☐ Yes
  - ☐ No
- How comfortable are you with a doctor reviewing your daily mood submissions to plan future sessions?

- (Very Uncomfortable)
  - (Uncomfortable)
  - (Neutral)
  - (Comfortable)
  - (Very Comfortable)
6. What is one feature missing from current student apps that you would like to see?
- (Open-ended): \_\_\_\_\_

### 3. Data Collection

- a. Number of participants: 18 students
- b. Data was collected using:
- c. Interviews (5 participants)
- d. Questionnaires (Google Forms) (18 participants)
- e. Participants were university students during the academic semester
- f. Responses were recorded through written notes and online form results

### 4. Data Analysis

#### ► Quantitative Results

##### 1. Stress Level During the Semester

- 38.9% rated their stress as Moderate (3)
- 33.3% rated it as High (4)
- 16.7% rated it as Very High (5)
- A small percentage reported Low or Very Low stress

## 2. Frequency of Using the "Daily Check-in" Feature

- 38.9% prefer using it 2–3 times a week
- 27.8% prefer Daily usage
- 22.2% prefer Once a week
- 11.1% would use it Rarely

## 3. Most Beneficial Application Feature

- 33.3% selected My Condition (Information & Articles)
- 27.8% selected Daily Check-in
- 22.2% selected Motivation (Tips & Quotes)
- 16.7% selected Session History

## 4. Impact of Motivational Messages

- 83.3% answered Yes → motivational messages increase engagement
- 16.7% answered No

## 5. Comfort Level with Doctor Reviewing Data

- 38.9% feel Neutral
- 33.3% feel Very Comfortable
- 22.2% feel Uncomfortable
- Few users feel Very Uncomfortable or Comfortable

## ► Qualitative Results

### 6. Missing Features (Open-ended Question)

Based on users' responses, the following key themes were identified:

- Integrated Support and Planning:  
Students want an app that combines mental health tracking with academic planning and personalized improvement plans.
- Actionable Tracking and Insights:  
Users prefer features like mood tracking with visual analytics (charts and progress over time).
- Privacy and Self-Expression:  
There is a need for a private diary or safe space to express feelings securely.
- Community and Instant Help:  
Students want direct communication with doctors, emergency support, and anonymous peer support.
- Smart Reminders:  
A smart notification system for check-ins, breaks, and stress management is highly desired.

## 5. Findings

### Main User Needs

Based on the data collected, the main user needs are:

- A simple and flexible mood tracking system (not daily compulsory)
- Mental health support combined with academic planning
- Privacy and security when sharing personal feelings
- Motivational support (short tips and encouragement)
- Easy communication with doctors or support systems
- Visual insights (charts, progress tracking)

### Problems Faced by Users

- Students do not track their mood regularly or forget to do so
- Feeling emotionally exhausted, leading to low engagement with apps
- Concerns about privacy when sharing personal information
- Lack of motivation to consistently use mental health apps
- Existing apps do not combine academic stress with mental health support

## **Patterns Noticed**

- Most students experience moderate to high stress levels
- Users prefer flexible usage (2–3 times per week) instead of daily tracking
- Motivational messages strongly increase engagement (83.3%)
- Many students feel neutral or slightly concerned about doctors accessing their data
- Strong demand for integrated features (tracking + support + planning in one app)

## **6. Conclusion & Recommendations**

### **Based on the findings:**

#### **1. Provide a Flexible and Smart Tracking System**

The app should allow users to track their mood without pressure (e.g., optional daily check-ins, smart reminders instead of strict schedules).

#### **2. Enhance Privacy and User Control**

- Allow users to control what is shared with doctors
- Clearly explain data privacy policies
- Provide features like editing entries before sending

#### **3. Integrate Support Features in One Platform**

- Combine mental health tracking + academic planning
- Add motivational messages after check-ins
- Include visual progress charts and insights

#### **4. Add Instant Support and Engagement Features**

- Enable direct communication with a doctor
- Add an emergency support button
- Provide anonymous community support

## User Interface

| Ghadeer Sami Nafadi   | 44511798  | 1            | Page 3 & Page 4                              |

## Page 1 – Home Page

The Home Page is the main landing page of the Mind Care application. It introduces the application name and slogan, “Your space to feel better,” to create a calm and supportive atmosphere for users. The page includes navigation options such as Home and Contact Us. The Home button allows users to quickly return to the main page from any section of the application, while the Contact Us option enables users to communicate with the support team for help, questions, or feedback. The page also contains Sign in and Sign up buttons that allow users to access or create an account easily. The soft colors and friendly illustrations were designed to make students feel comfortable and welcomed when opening the application.

## Page 2 – Sign In Page

The Sign In page allows existing users to securely access their accounts. The interface contains input fields for email and password, along with a sign-in button. A password visibility icon is included to improve usability and reduce input errors. The page maintains a clean and minimal design to help users focus on logging into the system quickly and easily. The calming visual elements and soft color palette also support the mental health theme of the application.

## Page 3 – Sign Up Page

The Sign Up page is designed for new users who want to create an account in the Mind Care application. The interface includes fields for email, password, and confirm password to ensure correct account registration. The page also contains a sign-up button that allows users to complete the registration process. Similar to the other pages, the interface uses soft colors, rounded shapes, and supportive illustrations to create a friendly and stress-free user experience.

## Page 4 – Main Menu Page

The Home Page is the main page of the Mind Care application. It introduces the application name and slogan, “Your space to feel better,” to create a calm and supportive feeling for students. The page includes navigation links such as Home and Contact Us at the top of the screen.

The main section contains four important buttons: Session History, My Condition, Motivation, and Daily Check-in. These buttons allow users to easily access the main features of the application. The soft background colors, rounded buttons, and friendly mental health illustrations were designed to make the interface welcoming, simple, and comfortable for students

## Page 5 – Daily Check-in Page

The Daily Check-in page allows students to record their mood and describe what happened during the day. The page asks the user, “How is your mood today?” and provides mood options such as Good, Natural, and Bad. This helps students quickly express their emotional state in a simple way.

The page also includes a text area where the user can write a short note about their day or any situation that affected their mood. After completing the check-in, the student can press the Submit to doctor button to send the information to the doctor.

## Page 6 – Sent Successfully Page

The page appears after the student submits the daily check-in form. It shows a confirmation message that says “Sent successfully,” which lets the user know that their information has been submitted to the doctor.

This page provides immediate feedback and reassures the student that the action was completed successfully. The OK button allows the user to close the message and continue using the application.

## Page 7 – My Condition Page

The My Condition page provides users with a personalized summary of their mental and emotional state based on their daily answers and activities within the application. The page displays different categories such as Mood Overview, Anxiety Level, and Sleep Quality to help users better understand their current condition. Each section includes supportive messages and friendly illustrations to encourage positive feelings and self-care habits.

The page also contains a progress chart that visually shows the user's emotional improvement over time, helping them track their mental wellness journey in a simple and motivating way. In addition, the Doctor Suggestion section provides encouraging advice and reminders to seek support when needed. Users can also download their report for future reference. The soft colors, rounded shapes, and calm design elements were carefully chosen to create a relaxing and supportive experience for students.

## Page 8 – Session History Page

The Session History page allows users to review their previous mental health sessions and track their emotional progress over time. The page displays a list of past sessions with dates and short summaries such as Mood Improved, Moderate Anxiety, Feeling Depressed, and Better Sleep. This feature helps users recognize patterns in their emotional well-being and reflect on their progress.

Each session includes a View Details button that allows users to access more information about their previous reports and recommendations. The page also provides an option to download reports for personal records. The simple layout, soft color palette, and supportive illustrations make the experience clear, organized, and comfortable for users.

## Page 9 – Motivation Page

The Motivation page is designed to encourage users and support their mental well-being through positive and uplifting activities. The page includes motivational sections such as Stay Positive, Inspiring Quotes, and Breathing Exercises to help students feel calmer, more confident, and emotionally supported.

Users can interact with the page by viewing motivational content or generating new inspirational quotes using the Get New Quote button. The breathing exercises section also helps users reduce stress and practice relaxation techniques. The warm illustrations, soft pastel colors, and friendly design elements create a comforting environment that motivates users to maintain healthy emotional habits and improve their overall mood.

## Page 10 – Contact Us Page

The Contact Us page allows users to communicate easily with the Mind Care support team whenever they need help, guidance, or want to share feedback and suggestions. The page contains contact information such as phone number and WhatsApp communication options to provide fast and convenient support for students.

The interface uses a simple and welcoming design with supportive text such as “Talk to us!” to encourage users to seek help without hesitation. The soft pastel colors, rounded elements, and friendly mental health illustrations help create a calm and safe environment for users. The navigation bar at the top of the page also allows users to quickly move between the Home page and the Contact Us section for a smooth user experience.
